

✔ Congratulations! You passed!

Next Item

✔ 1 / 1 points

1. After training a ridge regression model, you find the the training and test set accuracies are 0.98 and 0.54 respectively. Which of the following would be the best choice for the next ridge regression model you train?

✔ 1 / 1 points

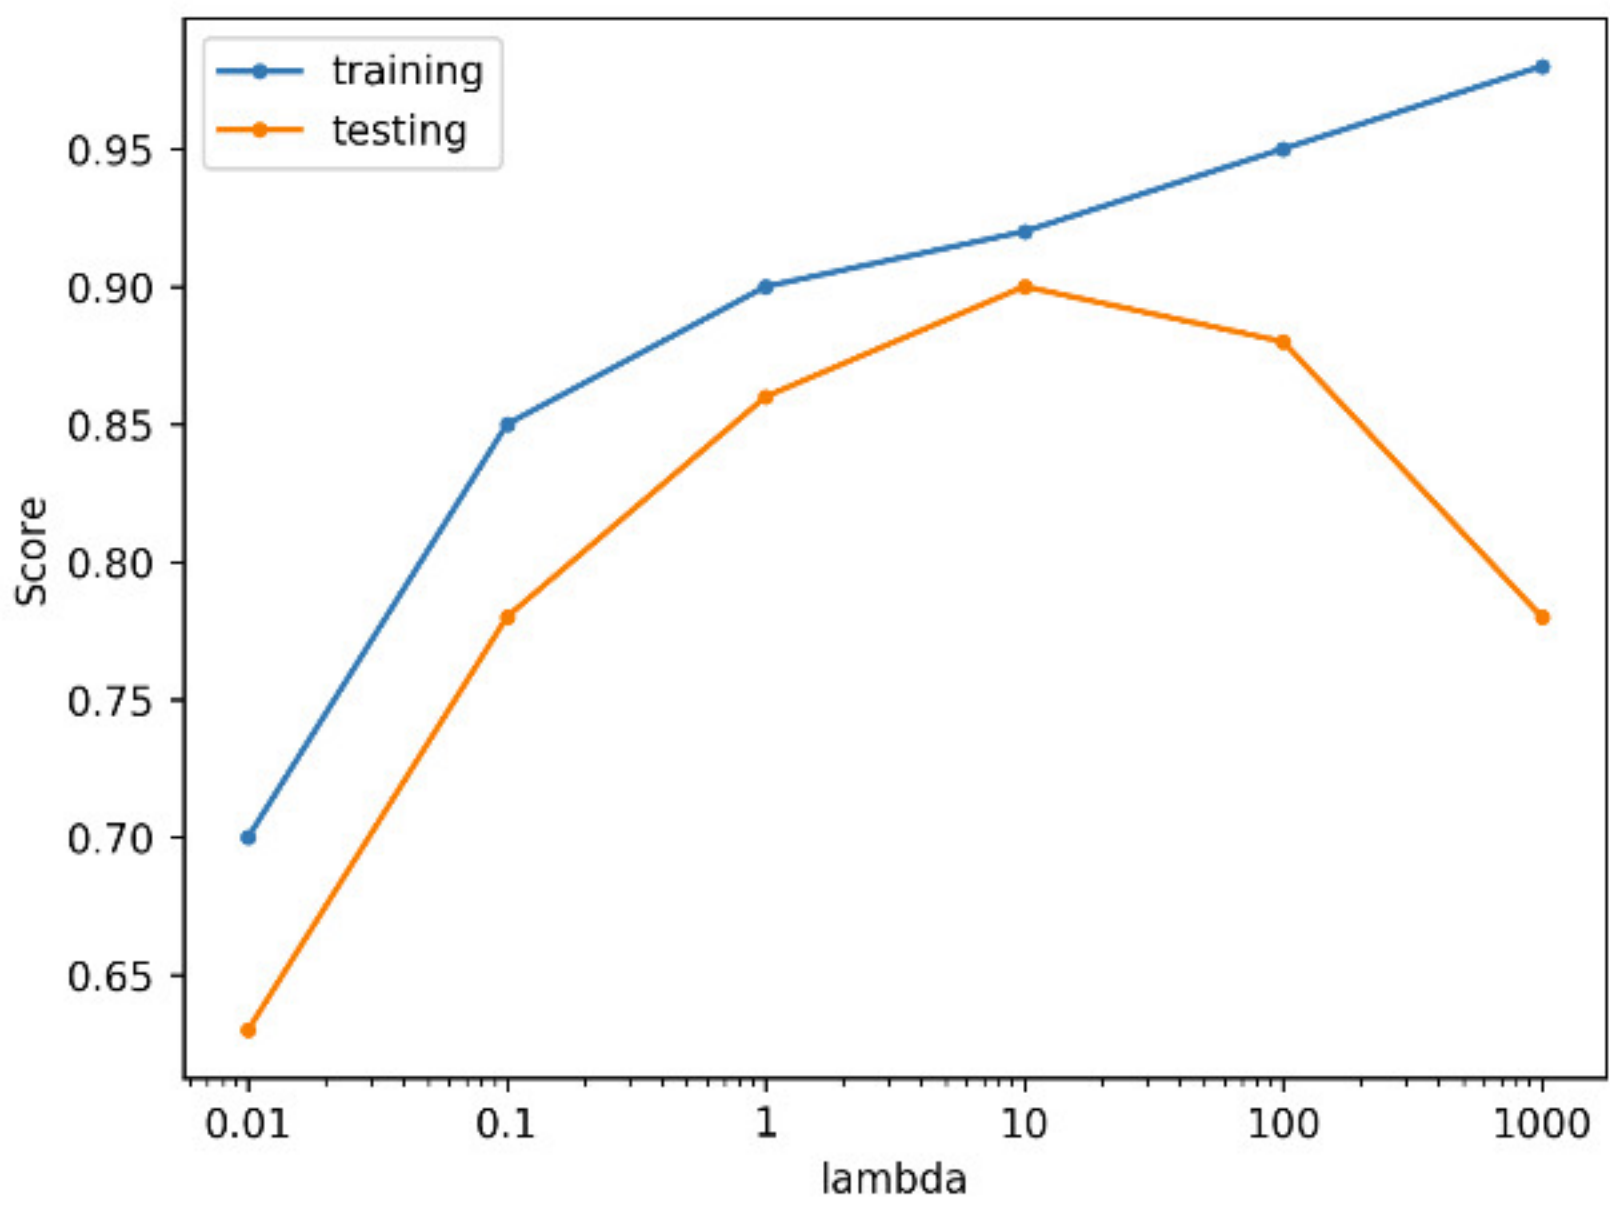

2. After training a Radial Basis Function (RBF) kernel SVM, you decide to increase the influence of each training point and to simplify the decision surface. Which of the following would be the best choice for the next RBF SVM you train?

✔ 1 / 1 points

3. Which of the following is an example of multiclass classification? (Select all that apply)

✔ 1 / 1 points

4. Looking at the plot below which shows accuracy scores for different values of a regularization parameter lambda, what value of lambda is the best choice for generalization?

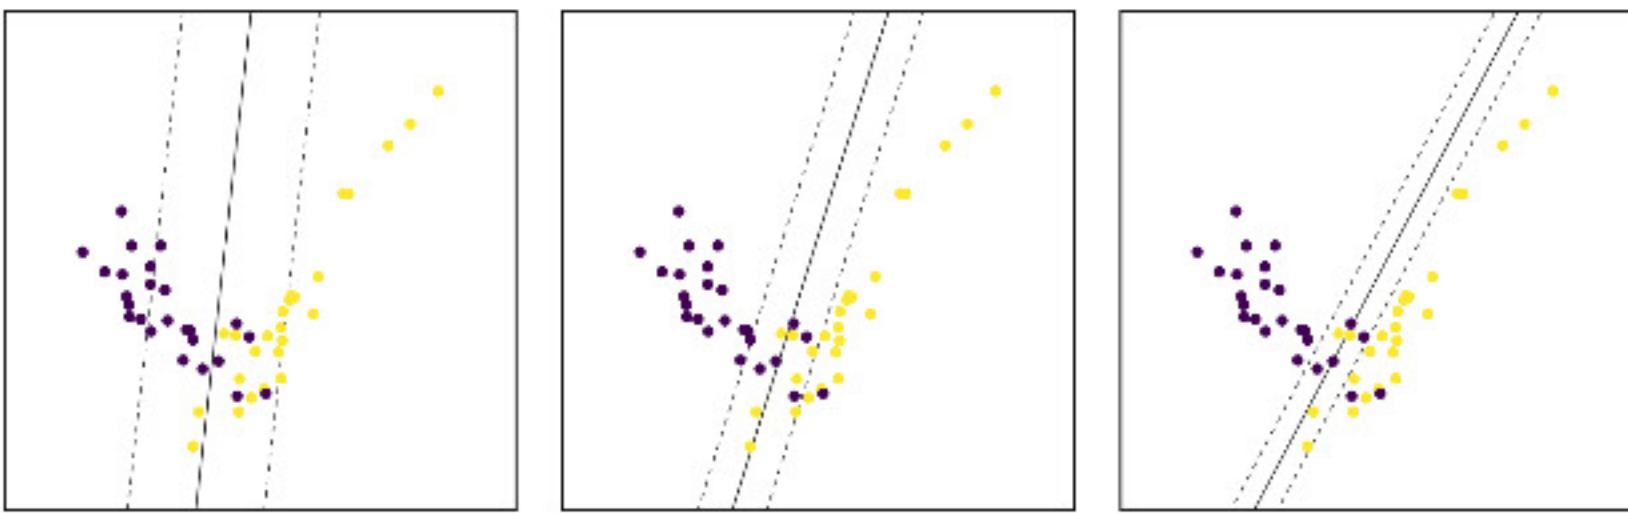

✔ 1 / 1 points

5. Suppose you are interested in finding a parsimonious model (the model that accomplishes the desired level of prediction with as few predictor variables as possible) to predict housing prices. Which of the following would be the best choice?

✔ 1 / 1 points

6. Match the plots of SVM margins below to the values of the C parameter that correspond to them.

✔ 1 / 1 points

7. Use Figures A and B below to answer questions 7, 8, 9, and 10.

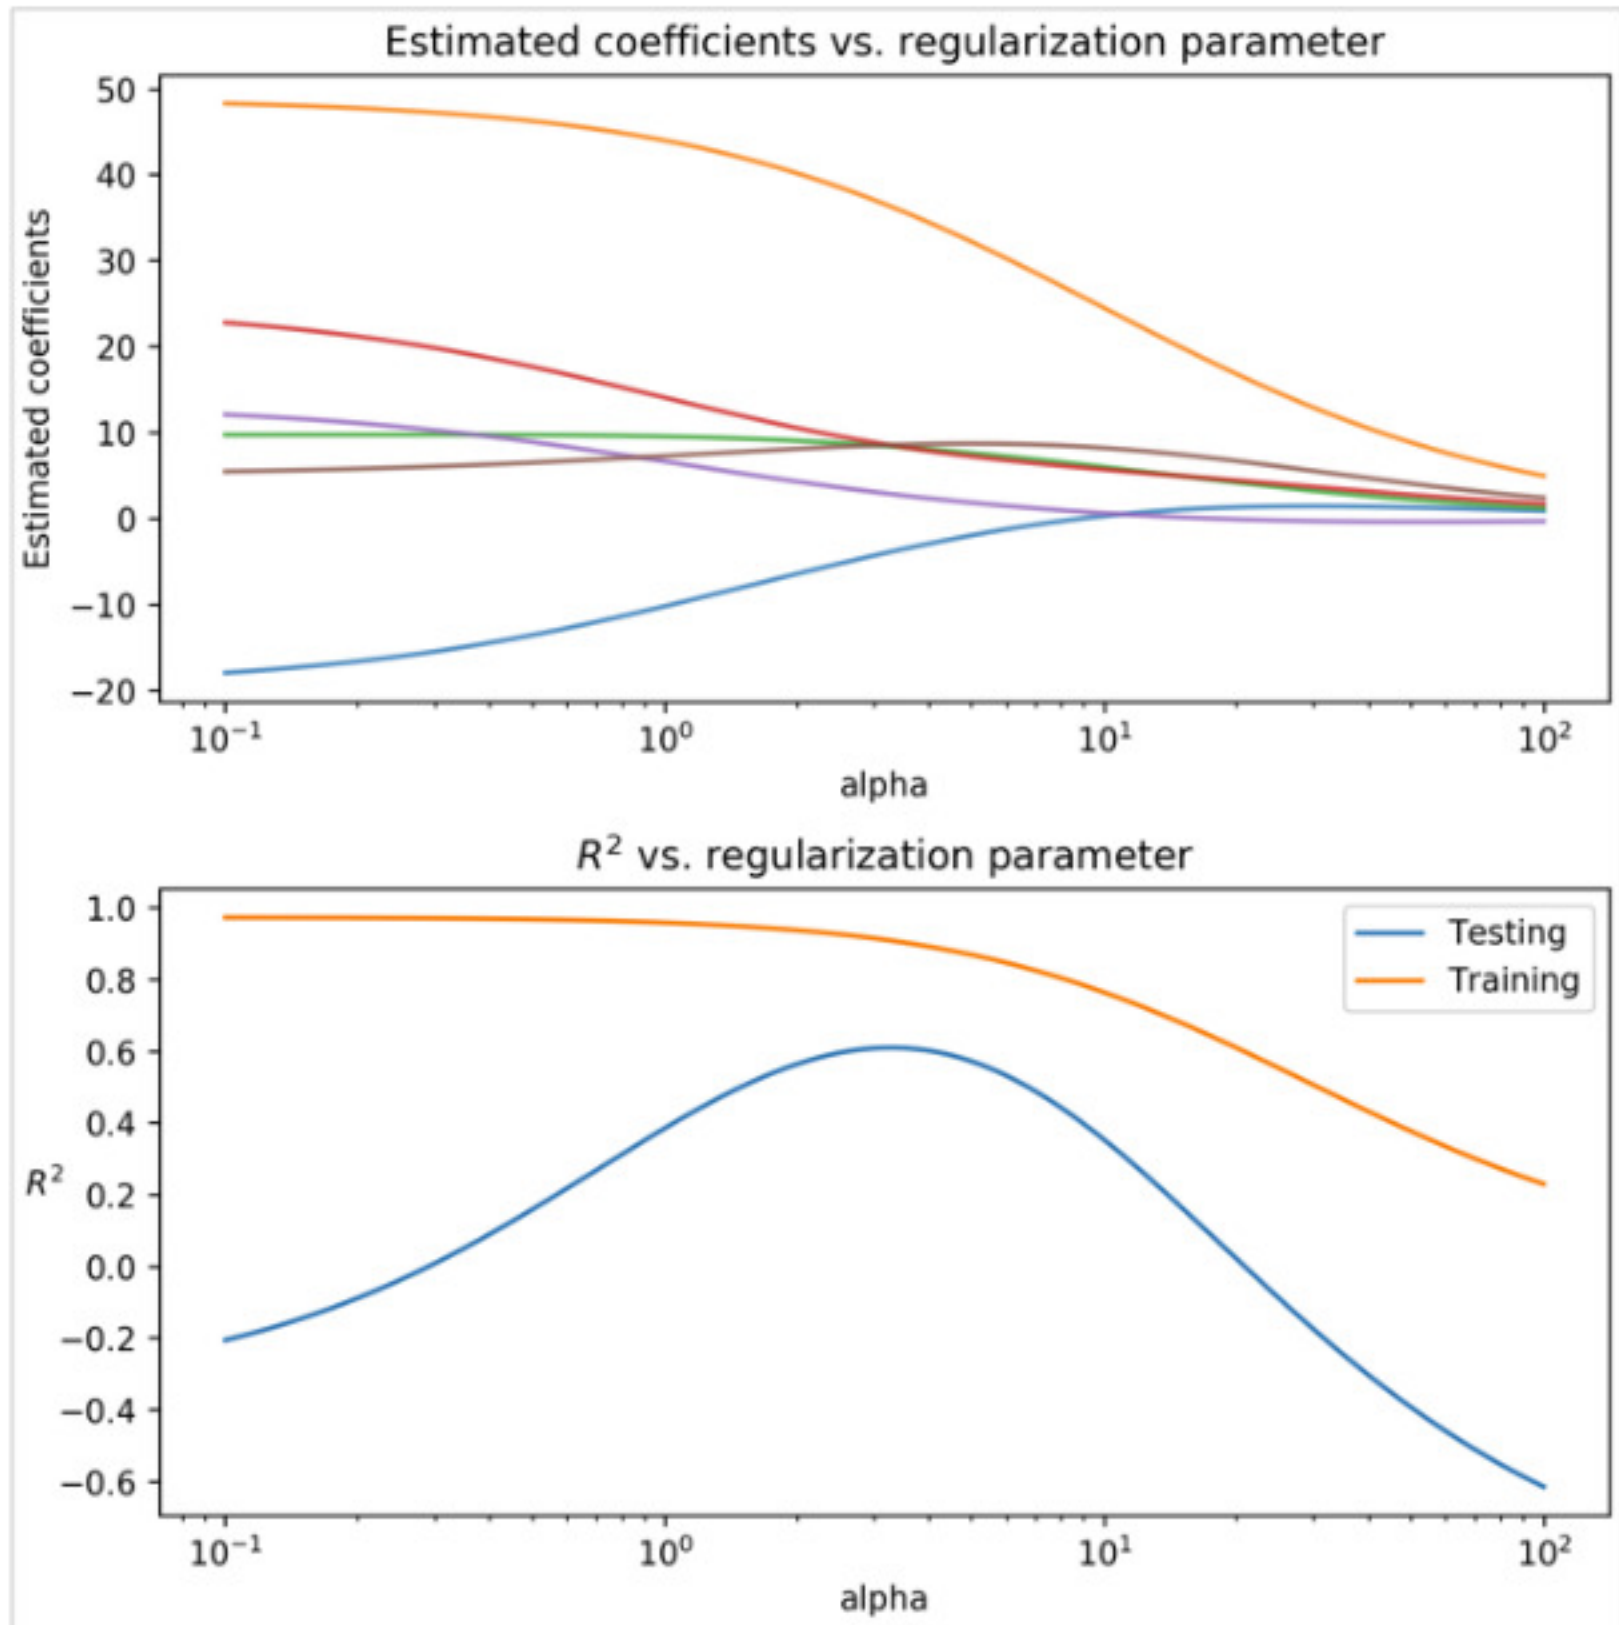

Figure A

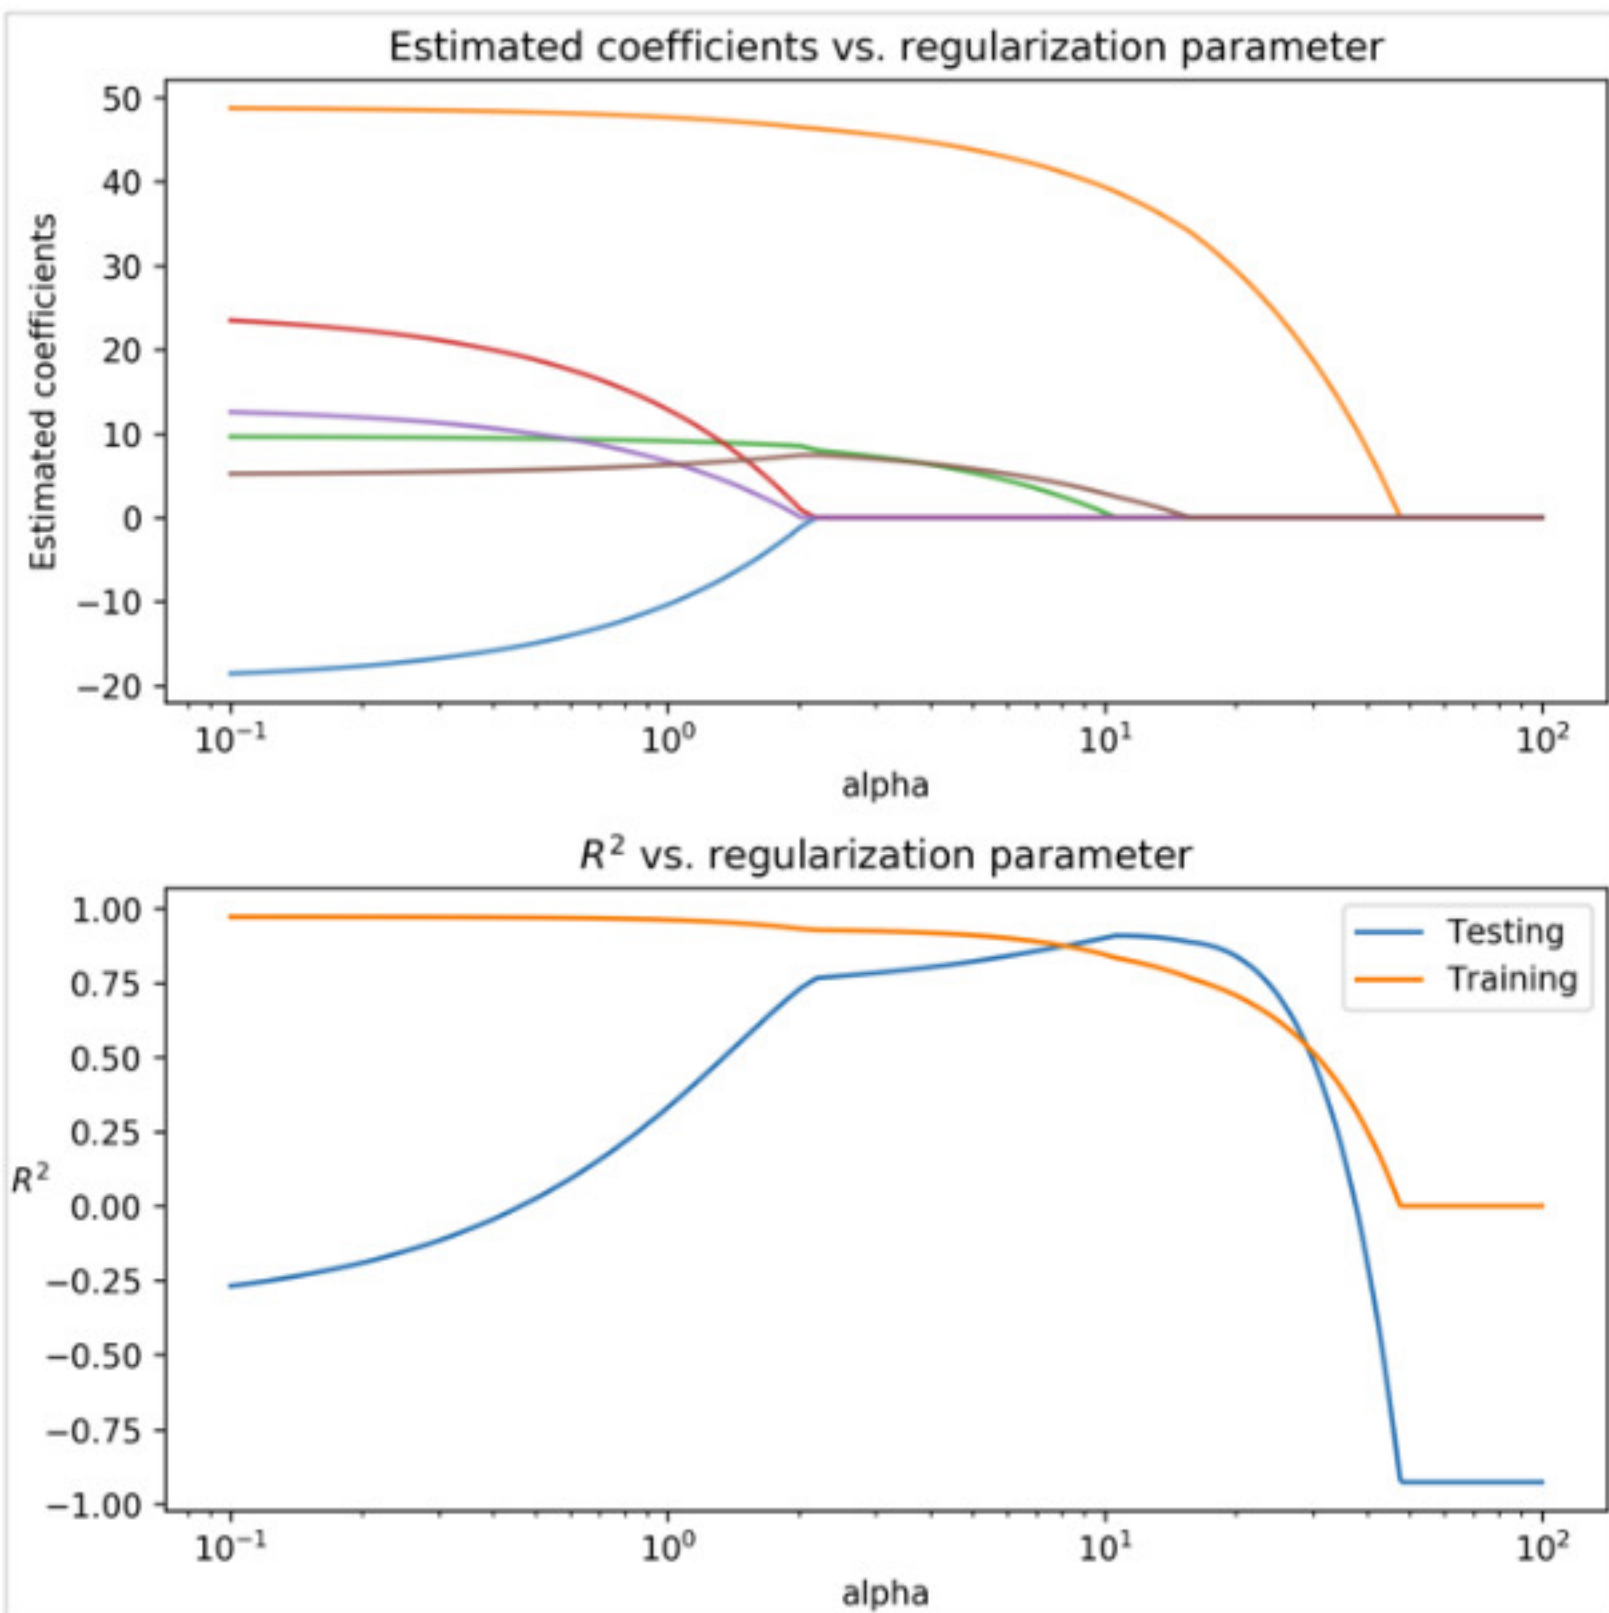

Figure B

Looking at the two figures (Figure A, Figure B), determine which linear model each figure corresponds to:

✔ 1 / 1 points

8. Looking at Figure A and B, what is a value of alpha that optimizes the R2 score for the Ridge Model?

Module 2 Quiz

Quiz, 11 questions

✔ 1 / 1 points

10. When running a LinearRegression() model with default parameters on the same data that generated Figures A and B the output coefficients are:

Coef 0	-19.5
Coef 1	48.8
Coef 2	9.7
Coef 3	24.6
Coef 4	13.2
Coef 5	5.1

For what value of Coef 3 is R2 score maximized for the Ridge Model?

0.6 / 1 points

11. Which of the following is true of cross-validation? (Select all that apply)
